

Rendered plinth 20 years after painting. Metal chair painted with Linseed Oil Paint.

Emulsion

For rendered and plastered surfaces (external and internal)

A water emulsion linseed oil paint is an ancient classic for plastered surfaces. e.g. kitchens, bathrooms and public spaces that suffer tough wear.

Emulsion with water makes the linseed oil paint tougher

This paint does not seal in moisture and can be used widely, e.g. on dry cellar walls, concrete floors, wooden floors, plastic floors, on plinths and stable walls.

The finish will be semi-matte and washable. Any variations in shine will even out over time.

- Whisk approximately 30% clean water into our Linseed Oil Paint with a high-speed paint whisk in a well-filled container.
- Apply with a roller, brush or spray.
- The mixture is ready when the consistency is that of yogurt.
- If water drops are squeezed out of the paint during painting, the emulsion process is incomplete. If this is the case, whisk in a little more paint.
- Newly plastered surfaces can be painted once the carbonation process is complete. It is best to consult your plasterer.
